

# PROBABILITY

B DHEERAJ KUMAR - FWC22008

13.3.4 <sup>1</sup> In answering a question on a multiple choice test, a student either knows the answer or guesses. Let  $\frac{3}{4}$  be the probability that he knows the answer and  $\frac{1}{4}$  be the probability that he guesses. Assuming that a student who guesses at the answer will be correct with probability  $\frac{1}{4}$ , what is the probability that the student knows the answer given that he answered it correctly?

**Solution:** : Let  $X \in \{0, 1\}$  where 0 denotes a guess and 1 denotes that he knows the answer. Let  $Y \in \{0, 1\}$  where 0 being the case when the answer is incorrect and 1 being the case that the answer is correct.

From the given information,

Random variable	Description
X=0	Student guesses the answer
X=1	Student knows the answer
Y=0	Answer is incorrect
Y=1	Answer is correct

Table 13.3.4.2: Random variables  $X$  and  $Y$

Pr(Event)	Value
$\Pr(Y=1   X=0)$	0.25
$\Pr(Y=1 X=1)$	1
$\Pr(X=0)$	0.75
$\Pr(X=1)$	0.25

Table 13.3.4.4: Probability of events  $X$  and  $Y$

The probability that the student knows the answer and he answered it correctly is

$$\Pr(X = 1|Y = 1) = \frac{\Pr(Y = 1|X = 1) \Pr(X = 1)}{\Pr(Y = 1|X = 1) \Pr(X = 1) + \Pr(Y = 1|X = 0) \Pr(X = 0)} \quad (13.3.4.1)$$

$$\Pr(X = 1|Y = 1) = \frac{0.25}{0.25 + 0.25 \times 0.75} \quad (13.3.4.2)$$

$$\Pr(X = 1|Y = 1) = 0.571 \quad (13.3.4.3)$$
