13.1.6 ¹ A coin is tossed three times where

(i) E:head on third toss, F:head on first two tosses

(ii)E:atleast two heads,F:atmost two heads

(iii)E:atmost two tails,F:atleast one tail

determine $P(E | F)$

Solution: : In an experiment of tossing a coin 3 times, random variable $X \in \{0, 1, 2, 3\}$ follows binomial distribution.

By using the binomial distribution formula :

$$\Pr(X=k)={}^nC_k \times p^k \times (1-p)^{n-k}$$

Random Variable	Values	Description
X	{0,1,2,3}	Number of heads or tails in a respective cases

Table 13.1.6.2: Random variable X

Variable	Description
k	total number of success
p	probability of success of individual trial
n	number of trials =3

i E:head on third toss, F:head on first two tosses

PARAMETER	DESCRIPTION
E	It is the head on the third toss
F	Head on the first two tosses
